

InSkill-4

Step 1: Install Maltego

1. **Download Maltego:**
 - Visit the Maltego website and download the Community Edition (CE) or use the Pro version if available.
2. **Install and Set Up:**
 - Install Maltego on your system.
 - Launch Maltego, and if you're using the Community Edition, create a free account to access the tool.

Step 2: Finding the Name Servers of `myntra.com`

1. **Create a New Graph:**
 - Open Maltego and create a new graph by selecting "New" or using the "Create New Graph" button.
2. **Add the Domain Entity:**
 - Drag the **Domain** entity from the left-hand side onto the graph.
 - Enter `myntra.com` as the domain name.
3. **Run the Name Server Transform:**
 - Right-click on the `myntra.com` entity.
 - Navigate to **Transform > To DNS Names > To DNS Name – Name Server (NS)**.
 - Maltego will run the transform and display the name servers associated with `myntra.com`.

Step 3: Finding Other Domains Using the Same Name Servers

1. **Select the Name Server Entities:**
 - After the name servers appear on your graph, select one of them.
2. **Run the Transform to Find Related Domains:**
 - Right-click on the selected name server.
 - Navigate to **Transform > To Domains > To Domains using this Nameserver**.
 - This transform will find and display other domains using the same name server.

Step 4: Finding Email Addresses Associated with These Domains

1. **Select the Domain Entities:**
 - Select the domain entities found in the previous step.
2. **Run the Transform to Discover Email Addresses:**
 - Right-click on one of the selected domain entities.
 - Navigate to **Transform > To People > To Email Addresses**.
 - This will reveal email addresses associated with the domains.

Step 5: Verifying the Email Addresses

1. **Verify Email Addresses:**

- Select the email addresses that were found.
- Right-click and select **Transform > To Email Address Information > To Verify Email Address**.
- This will run a check to see if the email addresses are valid and currently in use.

Step 6: Analyzing the Results

- **Review the Graph:**

- After running these transforms, your graph should contain a wealth of information, including:
 - Name servers associated with `myntra.com`.
 - Other domains using the same name servers.
 - Email addresses associated with those domains.
 - Verification status of those email addresses.

- **Export the Results (Optional):**

- If you want to keep a record or share the findings, you can export the graph as an image or the data as a CSV file.
